

Now the snow falls where you want it to!

Every Yamaha machine, from motorcycle to outboard to snowmobile, is designed and engineered to make your life more relaxing and enjoyable - and in the case of our snow throwers, to turn a chore into a pleasure! For over 30 years, we've been meeting the needs of consumers and professionals by constantly introducing the very latest technologies and innovative features into our line-up.

Now, our snow throwers will cut you wider paths, throw your snow further and more accurately - and do it with a smooth, quiet easy-going efficiency that will surprise and delight you.

So when the snow comes, Yamaha is there to help you move it to where you want it.

- Heavy duty steel 2-stage auger - for tough jobs
- 2-step chute - plastic liner reduces snow build-up
- Easy control of chute rotation - electric powered
- Easy auger height adjustment with free tilt system
- Adjustable Snow Jaw scraper - tough steel skids
- Smooth auger clutch & heavy duty casing
- Handy work light on control bar - a bright idea!
- Tough rubber track drive - great grip and traction
- Extra-wide (72cm) snow clearing performance
- Powerful 2-stage blower - throws snow 17 metres!
- Hydrostatic Transmission (HST) - a joy to drive

A little more power - a little less cost.

The YT1070 is our most rugged, no-nonsense 4-stroke machine, designed with extra-wide clearance capability and massive 17-metre throwing power. Power and economy for the toughest snow conditions.

Its impressive 60-tons-per-hour performance is thanks to Yamaha's many unique snow thrower design features being coupled to the latest version of our smooth, 4-stroke MZ300 engine.

The combination of a super-efficient auger and smooth Hydrostatic Transmission - with single lever control - makes it easy to use. Speed can be adjusted precisely and gradually without affecting auger speed and the rubber track drive delivers great grip and traction for the harshest snow conditions.

Powerful dual-stage auger/impeller system

The dual-stage auger/impeller system is designed to withstand the harshest winter conditions. The heavy-duty steel auger cuts a very wide path (72cm) and the tough, serrated cutting edge breaks up even icy, hard-pack snow - ready for the high-speed impeller to propel it through the 2-step chute - up to 17 metres at 60 tons per hour!

Tough rubber track drive system

No slipping, no sliding - just great control. The rubber tracks are pliable, with large cleats for added grip when manoeuvring in difficult conditions. They provide good traction, even on steep driveways - and you can even expect this machine to climb steps when necessary. The system works in perfect harmony with the Hydrostatic Transmission.

Reliability and durability you can count on

The Yamaha name is respected around the world for unmatched reliability and durability - and every Yamaha snowthrower builds on that heritage, with rugged materials such as thick steel for the heavy duty auger and chute systems, metal controls - and an oversized cast iron gear case. In short, our snow throwers are built to last.

Special equipment - that actually comes as standard

Dual-stage auger with free tilt system, adjustable Snow Jaw scraper with heavy duty steel skids, electric start, cleanout tool, work light, fuel cock with carburetor drain facility, automatic safety cut-out system ... just a few of the practical features you'll find fitted as standard. Result? Ultimate ease of operation.

Hydrostatic Transmission (HST)

Our durable hydrostatic transmission system offers more precise speed control as well as smoother shifts between Forward and Reverse - with the use of a single lever. So you can change speed or stop without disengaging the tracks or affecting the speed of the impeller - or the remarkable distance (up to 17 metres) you are throwing that snow!

Yamaha 4-Stroke OHV engine with electric and recoil starting

With the YT1070, you can simply turn the key, relax and enjoy the smooth, reassuring power of the latest Yamaha MZ300 4-stroke OHV engine. This durable and efficient 296cc air cooled unit provides plenty of torque and snow-throwing power, but also delivers excellent economy, while running on regular fuel (OCT95).

Motor

Tip motor	Monocilindru; 4 timpi; Răcit cu aer; OHV
Capacitate cilindrică	296cc
Model	MZ300
Putere maximă	7.0kw(9.5ps)
Sistem de aprindere	Electric baterie 12VDC (std)
Sistem de aprindere	TCI

Capacitate

Lăţime curăţare	715 mm
Înălţime plug	510 mm
Capacitate curăţare zăpadă	60tone/oră
Distanţa maximă de aruncare a zăpezii	17m

Sistemul de rulare

Sistem de transmisie	Hidrostatic
Viteza de înaintare la sol	0 - 3.2km/h
Viteza de mers cu spatele	0 - 2.4km/h

Sistem de sfredel

Diametru	350 mm
----------	--------

Control jgheab

Raza de bricare	220Âş
-----------------	-------

Dimensiuni

Capacitate rezervor carburant	5.8Litri
Capacitate motor de ulei	1.0Litri
Greutate la plin (inclusiv plin de benzină şi de ulei)	138
lungime x lăţime x înălţime globală	1,506mm x745mm x 1,105mm
