

Now the snow falls where you want it to!

Every Yamaha machine, from motorcycle to outboard to snowmobile, is designed and engineered to make your life more relaxing and enjoyable - and in the case of our snow throwers, to turn a chore into a pleasure! For over 30 years, we've been meeting the needs of consumers and professionals by constantly introducing the very latest technologies and innovative features into our line-up.

Now, our snow throwers will cut you wider paths, throw your snow further and more accurately - and do it with a smooth, quiet easy-going efficiency that will surprise and delight you.

So when the snow comes, Yamaha is there to help you move it to where you want it.

- Powerful Yamaha 4-stroke engine and electric start
- Hydrostatic Transmission (HST) - a joy to drive
- Powerful 2-stage blower - throws snow 14 metres!
- Wide (61cm) snow clearing performance
- Tough rubber track drive - great grip and traction
- Easy control of chute rotation - electric powered
- 2-step chute - plastic liner reduces snow build-up
- Heavy duty steel 2-stage auger - for tough jobs
- 3-step gas-assisted auger height-adjustment system
- Adjustable 'Snow Jaw' scraper
- Heavy duty auger gear case - for long service

Why not turn a chore into a real pleasure.

While its mighty 61cm clearing width and huge 14-metre throw will probably tempt you, it'll be the quietly powerful Yamaha 4-stroke engine, serrated dual-stage auger, two-step chute and Hydrostatic Transmission (HST) that will complete the picture and win you over.

Controlling the HST with its single lever is easy, so you can adjust speed precisely and gradually in Forward or Reverse, while the rubber track drive delivers great grip and traction.

This high performer breaks through even icy, hard-packed snow and has an electrically controlled two-stage chute with a 230° turning radius. So no matter what winter throws at you, throw it right back with the remarkable YT660.

Yamaha 4-Stroke OHV engine with electric start

With the YT660 you can simply turn the key, relax and enjoy the smooth, quiet, reassuring power of the efficient and reliable Yamaha 4-stroke OHV engine. This durable, well-proven 175cc air-cooled unit provides plenty of torque and snow-throwing power, but also delivers excellent fuel economy, running on regular fuel (OCT95).

Hydrostatic Transmission (HST)

Our durable hydrostatic transmission system offers more precise speed control as well as smoother shifts between Forward and Reverse - with the use of a single lever. So you can change speed or stop without disengaging the tracks or affecting the speed of the impeller - or the remarkable distance (up to 15 metres) you are throwing that snow!

Powerful dual-stage auger/impeller system

The dual-stage auger/impeller system is designed to withstand the harshest winter conditions. The heavy-duty steel auger cuts a very wide path (61 cm) and has a serrated cutting edge that breaks up even icy, hard-packed snow - ready for the high-speed impeller to propel it through the 2-step chute and throw it up to 15 metres away.

Tough rubber track drive system

No slipping, no sliding - just great control. The rubber tracks are pliable, with large cleats for added grip when manoeuvring in difficult conditions. They provide good traction, even on steep driveways - and you can even expect this machine to climb steps when necessary. The system works in perfect harmony with the Hydrostatic Transmission.

Plastic-lined chute and easy-to-use controls

The 2-step chute has a plastic liner which prevents the build-up of wet snow and also reduces noise and wear. Rotation is electric-powered, with angle adjustment by a single lever. The interlock lever for auger and drive engagement is a one-handed operation too, leaving the other free to adjust speed or chute position on the fly.

Gas-assisted auger tilt system

The tough, 2-stage steel auger - with its aggressive serrated edge and 'Shock Protector' - also has a 3-position, gas-assisted tilt system, including a very helpful 'float' setting that allows the machine to adapt to the snow conditions by following the ground contours. Adjustment is simple and quick, using a single lever on the control bar.

Engine

Τύπος κινητήρα	Μονοκύλινδρος; Τετράχρονος; Αερόψυκτος; OHV
Κυβισμός	171κ.εκ.
Μοντέλο	MZ175E
Μέγιστη ισχύς	4.4kw(6.0ps)
Σύστημα εκκίνησης	Electric 12VDC battery type (std); manual recoil (with auto decompressor)
Σύστημα ανάφλεξης	TCI

Capacity

Clearing width	615 χλστ.
Housing height	440 χλστ.
Snow clearing capacity	35tons/hr
Maximum snow throwing distance	14m

Drive system

Σύστημα μετάδοσης	Hydrostatic
Ground speed forward	0 - 3.2χλμ./ώρα
Ground speed reverse	0 - 2.4χλμ./ώρα

Auger system

Diameter	310 χλστ.
----------	-----------

Chute control

Turning radius	220°
----------------	------

Dimensions

Χωρητικότητα Δοχείου Καυσίμου	4.5λίτρα
Engine oil capacity	0.6λίτρα
Βάρος (πλήρες υγρών)	102{κιλά}
Συνολικό μήκος x πλάτος x ύψος	1,476mm x637mm x 1,108mm
