

All the power you need – without ever disturbing the fish

Yamaha Electric Drives are the most environment-friendly way to power your small boat when you're out relaxing on the water.

With these neat units, relaxation is the key. There is almost no noise and certainly no exhaust fumes, so you never have to worry about anything disturbing you – or about disturbing anything else, because for keen fishermen and lovers of nature that's the added bonus: a Yamaha Electric Drive won't scare wildlife away. So you can make the most of your day in the great outdoors.

Powered by a compact 12-Volt battery, your Yamaha Electric Drive is ultra-portable. Which also makes it perfect for a small tender or dinghy.

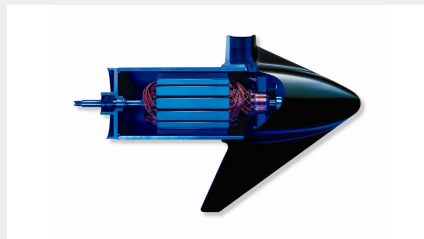

- Very simple and light to carry about - and to fit
- Surprisingly powerful - but easy to control
- Tough construction and dependable 12-Volt motor
- Almost indestructible composite prop shaft
- Comfortable tiller with twist-on hand control
- Versatile steering tension control
- Power propeller resists weeds and trailing debris
- Push-to-Test meter - for easy battery level checks
- Extremely friendly to the environment
- Quick-Cam Depth Adjuster - easy prop depth control

Indestructible composite shaft

Our ultra-high-yield composite shafts are stronger than steel, virtually indestructible and flex on impact, before returning to their original position. They won't kink, break, rust or corrode.

Smooth, cool and quiet power

The extra large windings and commutators dissipate heat, resulting in cooler operation, extended battery power and longer motor life, while the unique bearing system reduces friction to cut fish-spooking noise. You'll be so quiet, they'll never hear you coming.

Twist-on hand control

Benefit from an enhanced level of versatility with the Tilt/Extend Tiller handle, found on the M20. Offering tilt up to 45°, and extension up to 15cm, it's easy to adjust to any situation or style of fishing. The M20 also features a comfortable contoured grip.

Versatile steering tension control

An innovative collar, above the engine mount of the M20, makes it easy to adjust steering tension to the level you prefer. Keep it loose for effortless steering, or tighten it down to keep the engine more firmly in place, allowing for a 'stiffer' steering feel - or for stability when stowing the engine away.

Quick-Cam Depth Adjuster - easy prop depth control

Change the depth of the prop simply and securely with the Quick-Lock Cam Depth Adjuster. This clever feature makes adjustment simple - and locks in tightly, to keep your motor right where you want it.

A really tough little power partner

As well as its indestructible (almost) composite shaft, the great little M20 outboard is tough in every other sense too - from its hard-working, permanent magnet 12-Volt motor and its hard-wearing, weed-resistant power propeller right down as far as its hard-to-damage casing. In short, it goes where you go. With no drama.

Electric-Drive Technical specs	
Static Thrust (kg)	20.4
Amp Draw	42
Voltage	12
Weight (kg)	10
