

Errors while compiling a Template.

Please try the following to solve the situation:

* If the problem is about missing/invalid references or multiple defines either try to load the missing references manually (in the compiling appdomain!) or

Specify your references manually by providing your own IReferenceResolver implementation.

See <https://antaris.github.io/RazorEngine/ReferenceResolver.html> for details.

Currently all references have to be available as files!

* If you get 'class' does not contain a definition for 'member':

try another modelType (for example 'null' to make the model dynamic).

NOTE: You CANNOT use typeof(dynamic) to make the model dynamic!

Or try to use static instead of anonymous/dynamic types.

More details about the error:

- error: (34, 55) The name 'TemplateHelper' does not exist in the current context

- error: (41, 24) The name 'TemplateHelper' does not exist in the current context

- error: (45, 28) The name 'TemplateHelper' does not exist in the current context

- error: (48, 28) The name 'TemplateHelper' does not exist in the current context

- error: (72, 32) The name 'TemplateHelper' does not exist in the current context

- error: (133, 29) The name 'TemplateHelper' does not exist in the current context

- error: (460, 20) The name 'TemplateHelper' does not exist in the current context

Temporary files of the compilation can be found in (please delete the folder): D:\local\Temp\RazorEngine_50ne3a2d.fpc

The template we tried to compile is:
